

# MU Track, Soccer and Softball Complex

Columbia, Missouri

*(Aerial photo courtesy of Midwest)*

Prior to construction of this complex, the University of Missouri was forced to host its track and field meets at nearby high school facilities.

This outdoor complex was designed for NCAA Conference Championships and large regional competitions. The facility includes areas for sprint, pole vault, shot put, soccer and softball. Permanent grandstand seating is arranged back-to-back, creating two stadia within the complex. CM Engineering worked closely with Peckham and Wright Architects to design plumbing, electrical and lighting systems for the complex and deliver a world-class facility on a demanding construction schedule.

## Outdoor Sports Complex

- Plumbing system design
- Electrical system design
- Lighting design

*The complex was designed with back-to-back grandstands, creating two stadia that are served by a central entrance, ticketing and concession area.*
